

Lissel Road Bridge, Simpson

Bridge Refurbishment & Strengthening 2019

3rd December
2018 Update No.2

Lissel Road Bridge is located at Lissel Road, carrying a residential estate access road over a watercourse in the village of Simpson. The structure is a single span reinforced concrete deck slab supported on concrete abutments. The footways/verges have failed the structural assessment and a new reinforced concrete slab will be built to comply with current design load standards.

This scheme forms part of Milton Keynes Council ongoing commitment to upgrading and improving the bridge stock and road network.

Bridges and Highway Structures Team are responsible for the management of the project. The site works are to be undertaken by the Highway's Term Service Contractor Ringway in conjunction with their design consultant and specialist sub-contractors.

The works comprise:

- Strengthening of the concrete deck edge slabs with service bays
- Waterproofing of the whole deck slab
- Installation of new parapets at the edge sections
- Resurfacing of the carriageway

The site works are planned to be undertaken during Winter/Spring 2019. Access will be maintained for the residents at all times.
