Speedwell Place Footbridge, Redway and Portway 4 Day Closure
09:30 until 16:30 Starting 21st May 2019

Speedwell Place Footbridge is a Redway footbridge spanning the A509 H5 Portway linking Con niburrow to Central Milton Keynes. The bridge is having a structural assessment as part of an ongoing programme of works.

What works are required?

It will be necessary to take concrete samples from the bridge and carry out several other tests. The result of these tests helps us examine the overall loading capacity and supports other data confirming the useful life span of the bridge. It can also tell us what maintenance is required to extend that lifespan. Several samples will be taken from the bridge deck, parapets and abutments.

How will the works affect road users & pedestrians?

The bridge and H5 dual carriageway will be fully closed each day between 09:30 and 16:30. This will allow rush hour traffic to flow unhindered but unfortunately daytime users will need to take a diversion. There will be drilling and cutting machinery on the deck with hydraulic platforms operating below on the dual carriageway.
