

Modifying Resources for CYP with Vision Impairments

Always refer to the QTVI / ICT Specialist Teachers Reports for the following guidance when modifying resources, this will allow the CYP to access the same materials as their peers independently.

- Font style – Comic Sans MS or Arial - Bold
- Font size – these may vary between near or distance working
- Paper colour and layout – landscape
- Line spacing or word spacing

When using images/charts, consider the following:

- Offer colour images – clarity and contrast are not always as obvious on black and white images (see QTVI report as this may not apply depending on the CYP's medical condition)
- Do the key points of the image/chart stand out? Are lines bold and sufficiently contrasted to make them as clear as possible?
- Make sure any titles, headings and body of text are free from unnecessary images/text and can be easily accessed.

If you require any help or support with modifying resources, please contact:
