

# Recycled bird feeder

Help feed the birds in winter

## You will need:

Empty juice carton	Scissors
2 green plastic lids	2 small white plastic lids
Glue	Googly eyes
Old pencil / small stick	String / ribbon

1. Rinse out an empty juice carton. Use scissors to cut a U shape to create long wings on each side and fold so stick out slightly.
2. Cut out an arched hole in the front of the carton so the bird food can go inside. Remember to leave a small section at the bottom so that the food doesn't fall out.
3. Glue plastic bottle lids on the front and add googly eyes.
4. Add a small triangle of cardboard/paper under the eyes for a beak.
5. Make a small hole in the front and poke through an old pencil or small stick to make a perch of the birds to sit on.
6. Add a string or ribbon to the top of the carton.
7. Fill the feeder with bird seed or chopped up, leftover fruit, such as apples, grapes and oranges.
8. Hang up your bird feeder in the garden and watch for birds coming to enjoy it.
