1 INTRODUCTION

1.1 REPORT PURPOSE

1.1.1 WSP has been commissioned by the South West Milton Keynes Consortium (The Applicant) to provide transport advice for a residential led mixed-use development (the 'Proposed Development') on land referred to as South West Milton Keynes (the 'Site').

1.1.2 Planning permission for the Proposed Development was originally sought in 2015 from both Aylesbury Vale District Council (AVDC) (15/00314/AOP) and Milton Keynes Council (MKC) (15/00619/FUL).

1.1.3 In May 2020 a planning appeal was submitted against the decision to refuse planning permission for the Proposed Development by Milton Keynes Council (MKC) (planning application reference 15/00619/FUL). As part of the appeal submission, an Updated Transport Assessment (TA) was prepared to update the transport evidence base in accordance with good practice and as agreed with MKC and Buckinghamshire Council (BC)[1] and was also submitted to BC to support the planning application made to Aylesbury Vale District Council (15/00314/AOP).

1.1.4 In September 2020 a Transport Response Note (TRN1) was prepared to respond to comments made by BC in regard to the Updated TA (dated May 2020). Following further discussions and the response from BC dated 2nd October 2020, this Transport Response Note (TRN2) responds to the comments made by BC in their letter to BC Planning of 2nd October 2020 which relate primarily to the BC highway network. The response from BC also includes comments on two junctions within Milton Keynes (J5 – Tattenhoe Roundabout and J6 – Bottledump Roundabout) that are within the planning application red line boundary. A further review of these junctions will be considered in a subsequent TRN. The letter from BC is included at **Appendix A**.

1.1.5 Further to the submission of the Updated TA in May 2020, extensive discussions have been held with BC to seek agreement on technical matters and in particular, respond to their request for a modified approach to assess the impacts and determine appropriate mitigation. Whilst the Updated TA has been completed to an appropriately high technical standard and in accordance with previous scoping discussions with BC, the modified approach, as included within TRN2, is considered to be a reasonable one and has been adopted for the assessment of transport impacts on the local highway network which has led to the further refinement of the proposed mitigation. A summary is provided

[1] Updated TA May 2020 (Section 1.5)

at the end of each section of this TRN2 to identify where relevant areas of the Updated TA have been superseded using this modified approach.

1.2 REPORT STRUCTURE

1.2.1 Following this introduction, the remainder of the TRN2 is structured to respond directly to the comments received from BC. The comments from BC as indicated in their letter of 2nd October 2020 are indicated below in italics followed by WSP's response.

1.2.2 The remainder of the structure of this document is as follows:

- Chapter 2 – Base Model Calibration
- Chapter 3 – Trip Generation
- Chapter 4 – Base Model Update
- Chapter 5 – Mitigation Modelling Update
- Chapter 6 – Site Access Modelling
- Chapter 7 – Impact on Villages
- Chapter 8 – COBALT Analysis; and
- Chapter 9 – Travel Plan Action Plan

2 BASE MODEL CALIBRATION

2.1 MODEL CALIBRATION AND VALIDATION

BC Comment

'Further to the Bottledump calibration / model query detailed in Table 2 the following other items were raised in relation to the calibration:

1. Junction 3 – Whaddon Road, discrepancies remain between and observed queues. It is noted that this is now modelled as one lane to restrict capacity as discussed but still likely to be underrepresenting queues and delays on this Arm.

2. Junction 7 - Arms C and D seem to have a worse comparison between observed and modelled than non-calibrated model and should be clarified.

3. Paragraph 6.3.8 of TRN1 lists the junctions where calibration has been applied. Junction 8 is not included in this list however it would appear that at least one arm has different modelled queues Table 6.2 (Observed modelled queues Length Comparison – Post Calibration).

4. Junction 10 – Arms B + C seem to have a worse comparison between observed and modelled queues than non-calibrated model and should be clarified.'

'Discussions were held with the Highway Consultant around the calibration of models compared to queue lengths. It was apparent that there had been a differing of opinion on the requirements detailed in our initial highway response. This is to be rectified with the base model calibration to be further reviewed and re-submitted by the Highway Consultant.'

WSP Response

2.1.1 The maximum queue lengths presented in TRN1 have been considered in greater detail and maximum mean interval queues have been calculated as requested by BC. The maximum mean interval queue lengths have been used to re-calibrate the models as requested by BC for junctions within Buckinghamshire. The junction capacity assessments both with and without the mitigation measures have then been undertaken and are presented later in this TRN2. The following supplementary analysis considers a further review of the local highway network using a modified approach to calibration and validation to that presented in the Updated TA and TRN1. This modified approach adopts a methodology understood to be included within the TRL training guide for Junctions 9.

2.1.2 **Table 2-1** presents a comparison of the observed maximum queues, the maximum mean interval queues and the modelled queue lengths. The same methodology has been applied as adopted in

the Updated TA[2], with a notional threshold of a five-vehicle difference between the observed and modelled queue length to highlight where calibration might be reasonably considered appropriate, although some higher variances may still be acceptable. Modelled queue lengths have been highlighted in green where they meet this threshold and amber where the difference is greater than the notional threshold set.

2.1.3 A five-vehicle difference was agreed with BC as representing a reasonable tolerance taking account of the observed queue lengths and allowance for daily fluctuations in queues that would be expected, noting that the queue lengths were observed over a three-day period. Notwithstanding, there may be instances where a higher tolerance may still be acceptable particularly on a congested network.

[2] Updated TA Section 6.10

Table 2-1 – Observed And Modelled Queue Length Comparison – Pre-Calibration

Jct #	Location	Description	Arm	AM Peak (07:45-08:45)	PM Peak (17:00-18:00)	AM Peak (07:45-08:45)	PM Peak (17:00-18:00)	AM Peak (07:45-08:45)	PM Peak (17:00-18:00)
				Observed Maximum Queue (as reported in TRN1) (vehicles)		Observed Average Maximum Interval (as requested by BC) (vehicles)		Modelled Queue Prior to Calibration (vehicles)

		A421	C	0	0	0	0	0	0
9	A421 Shucklow Hill Little Horwood Road	Little Horwood Road	D	3	2	2	2	0	0
		A421 Standing Way (E)	A	1	2	1	1	0	0
		Shucklow Hill	B	4	3	3	2	0	0
		A421 Standing Way (W)	C	2	1	1	1	0	0
10	A421 Nash Rd Windslow	Winslow Road	D	4	4	3	3	1	1
		A421 E	A	17	14	7	9	4	5
		Nash Road	B	10	9	8	7	1	1
		A421 W	C	24	16	20	14	2	3
11	Stock Lane Coddimoor Lane Shenley Road	Shenley Road	B	2	3	1	2	0	0
		Coddimoor Lane Right-Turn	C	2	3	1	1	0	0

2.1.4 The modelled and observed queue data have been compared to identify locations where a difference is evident on any arm of a junction. Locations where the difference between the modelled and observed maximum queue on each arm is less than five vehicles are considered to validate satisfactorily and no calibration is necessary.

2.1.5 Locations where a five or more vehicle difference is observed have then been calibrated to achieve a more representative model. The junctions where model calibration is considered appropriate include the following, along with details of the various adjustments to geometric and capacity parameters that have been made in order to calibrate the models:

- Junction 3 – Whaddon Road entry width reduced from 3.98m to 2.5m;
- Junction 7 – Conflict angle on Whaddon Road adjusted from 17 to 42 degrees. The results in the base modelling are very sensitive to small adjustments in the intercept values for the AM and PM peaks. To provide correlated models, the AM and PM peaks have been split into two separate models with intercept adjustments of 200 on A421 East and -275 on Whaddon Road in the AM peak and 250 and -330 in the PM peak;
- Junction 10 – Intercept adjustment of -535 made to Nash Road and -370 to A421 West;

2.1.6 The queue length comparison was undertaken again following calibration to determine how well the models validated against the maximum interval queue values. The results are shown below in **Table 2-2.**

Table 2-2 – Observed And Modelled Queue Length Comparison – Post-Calibration

Jct #	Location	Description	Arm	AM Peak (07:45-08:45)	PM Peak (17:00-18:00)	AM Peak (07:45-08:45)	PM Peak (17:00-18:00)	AM Peak (07:45-08:45)	PM Peak (17:00-18:00)
				Observed Maximum Queue (as reported in TRN1) (vehicles)		Observed Average Maximum Interval (as requested by BC) (vehicles)		Modelled Queue Post Calibration (vehicles)	
3	Bletchley Road Stoke Road Drayton Road Whaddon Road	Whaddon Road	D	9	9	8	7	4	4
		Bletchley Road SB Right-Turn	A	2	1	1	1	0	0
		Stoke Road	B	12	11	10	10	13	6
		Drayton Road	C	1	1	0	0	0	0
4	Whaddon Rd - Westbrook End	Westbrook Road	B	2	1	2	1	0	0
		Whaddon Road (E)	C	2	3	1	2	0	0
7	Whaddon Crossroads	Coddimoor Lane	A	6	6	5	5	1	0
		A421 E	B	6	11	5	7	5	6
		Whaddon Road	C	14	19	12	14	10	13
		A421 W	D	16	14	12	9	12	6
8	Warren Road A421	Warren Road	B	5	3	4	2	6	1
		A421	C	0	0	0	0	0	0
9	A421 Shucklow Hill Little Horwood Road	Little Horwood Road	D	3	2	2	2	0	0
		A421 Standing Way (E)	A	1	2	1	1	0	0
		Shucklow Hill	B	4	3	3	2	0	0
		A421 Standing Way (W)	C	2	1	1	1	0	0
10	A421 Nash Rd Winslow	Winslow Road	D	4	4	3	3	0	0
		A421 E	A	17	14	7	9	4	5
		Nash Road	B	10	9	8	7	7	2
		A421 W	C	24	16	20	14	15	16
11	Stock Lane Coddimoor Lane Shenley Road	Shenley Road	B	2	3	1	2	0	0
		Coddimoor Lane Right-Turn	C	2	3	1	1	0	0

2.1.7 Following calibration using the modified approach as agreed with BC, it is evident that the observed and modelled queue lengths validate within the agreed five vehicle threshold.

2.1.8 SUMMARY OF THE DIFFERENCES COMPARED TO UPDATED TA AND TRN1

2.1.9 **Table 2-3** provides a summary of the changes presented in this Section when compared to the Updated TA and TRN1.

Table 2-3 – Elements of Updated TA and TRN1 that are changed by TRN2

Section of Updated TA	Section of TRN1	Description	Area of Difference
Section 6.10	Section 6.2	Model Calibration and Validation	Modified model calibration and validation process where relating to junctions 3,7 and 10 now supersedes the model calibration and validation in the Updated TA and TRN1

3 TRIP GENERATION

BC Comment

'It should be noted that the model review included an assessment of the Traffic Flow diagrams provided as part of the TRN1. On initial review and discussion with the Highway Consultant it was apparent that not all relevant diagrams for the reassessment in TRN1 were provided. Additional diagrams were sent detailing the process of the distribution of development flows, on further analysis not all flow information could be reconciled with further communication held with the Highway Consultant. The latest traffic flow diagrams were provided on Tuesday 29th September 2020 and are under review.'

WSP Response

3.1.1 Following discussions with BC, the traffic flows used in TRN1 have been updated and a new set of traffic flow diagrams prepared which are presented in **Appendix B**. For completeness the trip generation tables used in this TRN2 are repeated in **Table 3-1** and **Table 3-2**. The small discrepancies between the tables in TRN1 and TRN2 are due to the application of rail re-assignment and rounding. The traffic flow diagrams presented in **Appendix B** have then been used in the modelling presented in **Section 4** and **5** of this TRN2.

3.1.2 The trip generation used in TRN2 has been updated to account for the changes requested by BC to address the treatment of employment trips.[3]

[3] Buckinghamshire Council Letter 29th July 2020 Reference 5.3.1 and Paragraphs 5.2.2 to 5.2.5 in TRN1

Table 3-1 - Total Development Trip Generation Rail Trips Re-assigned (Excluding Travel Planning)

3.1.3 SUMMARY OF THE DIFFERENCES COMPARED TO UPDATED TA AND TRN1

3.1.4 **Table 3-3** provides a summary of the changes presented in this Section when compared to the Updated TA and TRN1.

Table 3-3 – Elements of Updated TA and TRN1 that are updated by TRN2

Section of Updated TA	Section of TRN1	Description	Area of Difference
Section 5.7 – Table 5.30-5.31	Table 5-2 and Table 5-3	Trip Generation	BC have requested the use of modified trip generation to consider higher employment numbers in 2033. These forecasts supersede those contained with the Updated TA and TRN1.

4 BASE MODEL UPDATE

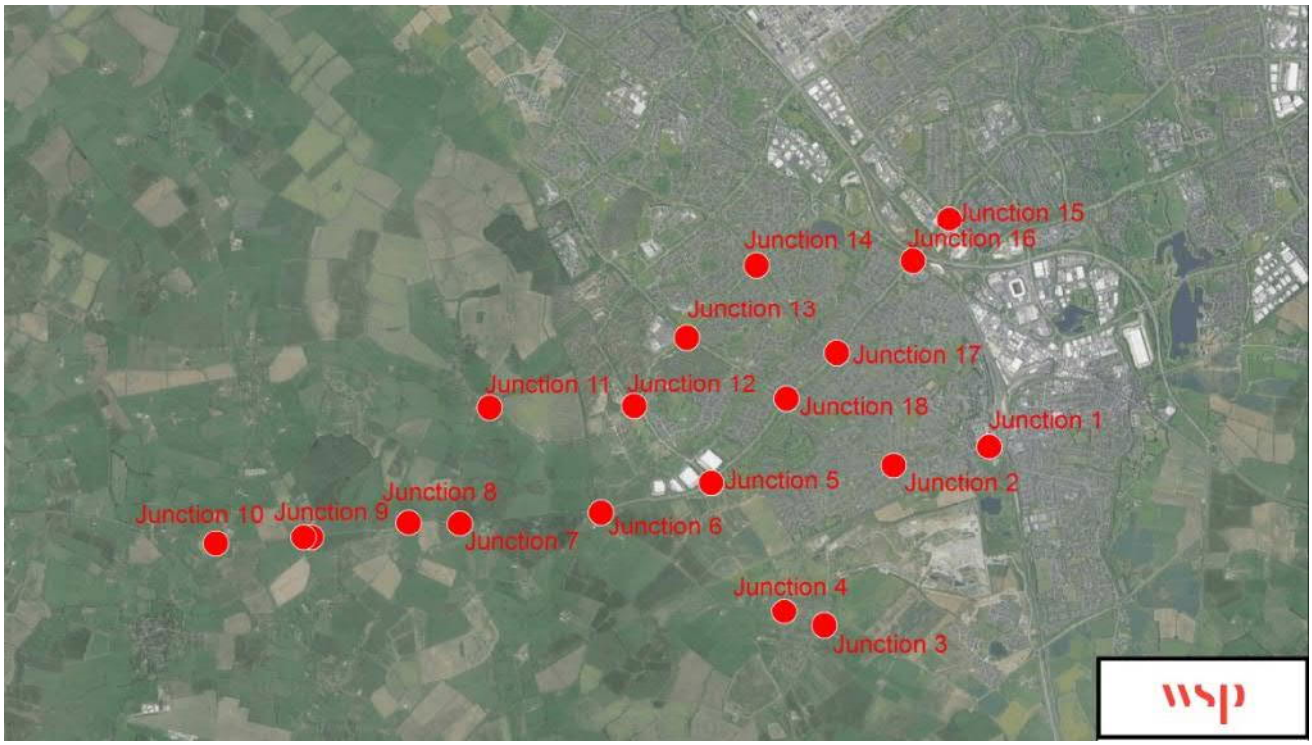
4.1 INTRODUCTION

4.1.1 This section provides an updated set of base model junction capacity assessments prior to consideration of any mitigation. A table is presented at the end of this Section to draw a comparison with the Updated TA and TRN1 and indicate those areas which have been superseded.

4.2 OFF-SITE JUNCTION CAPACITY ASSESSMENTS

4.2.1 To assist the understanding of this section, **Figure 4-1** provides a map of the junction locations considered in the Updated TA. TRN2 only considers the junctions within BC.

Figure 4-1 – Junction Location Plan



JUNCTION 3

BC Comment

'For the 2020 Base AM and PM scenarios the vehicle mix has been left as 'varies over time'. The use of the ONE HOUR profile would dictate that only one-hour data should be entered. The use of 'varies over time' will mean the model will use the entered first 15 minute of data as the whole period percentages and may impact on the results.'

WSP Response

4.2.2 The junction capacity assessment for this junction has been reviewed to respond to the comments made by BC and the traffic flows updated to reflect the traffic flow diagrams in **Appendix B**. **Table 4-1** shows the alternative capacity assessment results for the AM and PM peaks following calibration and addressing the comments raised. Full modelling output is provided in **Appendix C.**

Table 4-1 – Junction 3 - Bletchley Road/Stoke Road/Drayton Road/Whaddon Road

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2020 Base						
A- Bletchley Road	0.1	5.74	0.06	0.2	6.01	0.12
B-Stoke Road	12.9	113.5	0.99	6.1	60.99	0.89
C-Drayton Road	0.1	5.79	0.05	0	5.92	0.03
D-Whaddon Road	4.1	47.64	0.83	3.5	39.86	0.79
2033 Do Nothing						
A- Bletchley Road	0.1	5.69	0.08	0.2	6.05	0.14
B-Stoke Road	47.0	373.57	1.19	27.1	208.37	1.09
C-Drayton Road	0.1	5.79	0.06	0	5.93	0.03
D-Whaddon Road	16.1	147.23	1.02	9.9	98.01	0.96
2033 Do Something 1						
A- Bletchley Road	0.1	5.71	0.08	0.2	6.09	0.14
B-Stoke Road	72.5	614.15	1.30	52.9	437.38	1.22
C-Drayton Road	0.1	5.74	0.06	0	5.83	0.03
D-Whaddon Road	46.0	416.88	1.20	27.5	221.76	1.10
2033 Do Something 2						
A- Bletchley Road	0.1	5.71	0.08	0.2	6.08	0.14
B-Stoke Road	67.9	577.17	1.28	49.0	396.85	1.20
C-Drayton Road	0.1	5.75	0.06	0.0	5.84	0.03
D-Whaddon Road	41.4	366.06	1.18	24.1	199.11	1.08
2033 Do Something 3						
A- Bletchley Road	0.1	5.71	0.08	0.2	6.09	0.14
B-Stoke Road	79.7	672.66	1.32	60.1	507.85	1.25
C-Drayton Road	0.1	5.73	0.06	0.0	5.82	0.03
D-Whaddon Road	57.7	538.56	1.26	31.1	246.80	1.12

4.2.3 The results presented in **Table 4-1** show that in the 2020 Base, the Stoke Road arm is approaching capacity (RFC of 1) in the AM peak. In the future year of 2033 (Do Nothing) the Stoke Road arm

operates at/above capacity (RFC of 1) in both peak hours with a maximum queue of 47 vehicles and a delay of 373 seconds in the AM peak.

4.2.4 With the addition of the Proposed Development (Do Something 1), performance of the junction decreases slightly with a maximum queue on Stoke Road of 73 vehicles and a delay of 614 seconds; an increase of 26 vehicles and 241 seconds in the AM peak. In the PM peak the delay increases from 208 seconds in the Do Nothing scenario to 437 seconds in Do Something 1; an increase of 229 seconds.

4.2.5 Whaddon Road is shown to operate within capacity in the 2020 base in both peak hours. By 2033 the arm operates at/above capacity (RFC of 1) in the AM peak hour and is approaching capacity in the PM peak. With the addition of the Proposed Development (Do Something 1), performance of the arm decreases with a maximum queue of 46 vehicles and a delay of 416 seconds in the AM peak. This represents an increase of 30 vehicles and a delay of 270 seconds.

4.2.6 Similar results are evident in both the travel planning (Do Something 2) and Shenley Park (Do Something 3) scenarios.

4.2.7 A package of mitigation is proposed within the Updated TA[4]. The mitigation is considered further in **Section 5** of this TRN2**.**

JUNCTION 4

BC Comment

> *'D3 scenario – The AM vehicle mix for arms B and C and the PM vehicle mix for Arms A, B and C do not match the traffic flow diagram or the previous demand set percentages, I presume this is a data entry issues or is there a reason why the vehicle mix varies for this scenario?'*

WSP Response

4.2.8 The junction modelling has been updated to incorporate the updated traffic flow diagrams provided in **Appendix B**. **Table 4-2** shows the alternative capacity assessment results for the AM and PM peaks. Full modelling output is contained in **Appendix C**.

[4] Updated TA (May 2020) paragraph 7.3.6

Table 4-2 – Junction 4 - Whaddon Road/Westbrook End

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2020 Base						
B-Westbrook End*	0.2	8.52	0.15	0.1	7.61	0.08
C-Whaddon Road	0.2	5.66	0.1	0.2	5.38	0.11
2033 Do Nothing						
B-Westbrook End*	0.2	9.21	0.18	0.1	8.05	0.10
C-Whaddon Road	0.3	5.60	0.13	0.3	5.33	0.14
2033 Do Something 1						
B-Westbrook End*	0.2	9.71	0.19	0.1	8.47	0.10
C-Whaddon Road	0.3	5.44	0.14	0.3	5.24	0.15
2033 Do Something 2						
B-Westbrook End*	0.2	9.63	0.19	0.1	8.40	0.1
C-Whaddon Road	0.3	5.46	0.14	0.3	5.26	0.15
2033 Do Something 3						
B-Westbrook End*	0.2	9.87	0.19	0.1	8.59	0.10
C-Whaddon Road	0.3	5.38	0.14	0.4	5.23	0.15

4.2.9 The results presented in **Table 4-2** show that the junction operates with satisfactory performance (i.e. RFC below 0.85) in all scenarios assessed.

4.2.10 The impacts of the Proposed Development are not considered to be significant at this junction and mitigation is therefore not necessary as the junction can accommodate traffic associated with the Proposed Development. This is consistent with the outcome in the Updated TA.[5]

[5] Updated TA (May 2020) Paragraphs 7.3.8 to 7.3.10

JUNCTION 7

BC Comment

'For the 2033 Base, 2033 DS1, 2033 DS2 and 2033 DS3 the Arm D to B vehicle mix is 4% in the AM, while the 2020 Base is 5% and all flow diagrams show 4.5%. Would expect these values to be match.'

WSP Response

4.2.11 The junction capacity assessment for this location has been reviewed to reflect the comments made by BC and the traffic flows updated to reflect the traffic flow diagrams in **Appendix B.** The updated junction capacity assessment results are shown in **Table 4-3**. Full modelling output is contained in **Appendix C**.

Table 4-3 – Junction 7 – Whaddon Crossroads

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2020 Base

D - A421 (West)	84.4	191.78	1.11	40.2	94.76	1.03

4.2.12 The results presented in **Table 4-3** show that in the 2020 AM Base, the western arm of A421 along with the Whaddon Road arm are approaching capacity (RFC of 1). In the 2020 PM Base, the Whaddon Road arm operates at/above capacity (RFC of 1). In the future year of 2033 (Do Nothing), the approaches of A421 and the Whaddon Road arm are operating at/above capacity (RFC of 1) in both the AM and PM peaks. Maximum queueing is 72 vehicles with a corresponding delay of 932 seconds on Whaddon Road in the PM peak.

4.2.13 With the addition of the Proposed Development (Do Something 1), performance of the junction decreases with both arms of A421 and Whaddon Road operating at/above capacity (RFC of 1) in the AM and PM peak. Maximum queueing is 112 vehicles with a corresponding delay of 1326 seconds on Whaddon Road in the PM peak representing an increase in queuing of 40 vehicles and delay of 394 seconds.

4.2.14 Similar results are evident in both the Do Something 2 (travel planning) and Do Something 3 (Shenley Park) scenarios.

4.2.15 A package of mitigation is proposed within the Updated TA[6]. The impacts of the proposed development in TRN1 were identified as being different and a modified package of mitigation previously identified. This modified package of mitigation has been further refined and is considered within **Section 5** of this TRN2.

JUNCTION 8

4.2.16 The junction capacity assessment for this location has been updated to reflect the traffic flow diagrams in **Appendix B.** The updated junction capacity assessment results are shown in **Table 4-4**. Full modelling output is contained in **Appendix C**.

[6] Updated TA (May 2020) Paragraphs 8.3.9 to 8.3.12

Table 4-4 – Junction 8 – A421/Warren Road

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2020 Base						
B-Warren Road	6.1	231.06	0.98	0.5	74.43	0.36
C-A421 (West)	0	8.63	0.01	0	9.19	0
2033 Do Nothing						
B-Warren Road	56.6	1796.20	9999	15.5	1519.60	9999
C-A421 (West)	0	10.01	0.01	0	10.87	0
2033 Do Something 1						
B-Warren Road	62.1	1469.68	9999	18.8	1598.89	9999
C-A421 (West)	0	10.49	0.01	0	11.37	0
2033 Do Something 2						
B-Warren Road	61.4	1434.12	9999	18.2	1582.52	9999
C-A421 (West)	0	10.43	0.01	0	11.27	0
2033 Do Something 3						
B-Warren Road	62.9	1566.32	9999	18.8	1617.35	9999
C-A421 (West)	0	10.72	0.01	0	11.46	0

4.2.17 The results presented in **Table 4-4** show that in the 2020 Base the junction operates approaching capacity (RFC of 1). In the future year of 2033 (Do Nothing), the Warren Road arm operates well above capacity (RFC of 1) in the AM peak with a maximum queue of 57 vehicles and a delay of 1796 seconds. The results indicate an RFC of 9999 which indicates that there is insufficient capacity on the arm to accommodate the demand flow.

4.2.18 With the addition of the Proposed Development (Do Something 1), performance of the junction decreases slightly with an increase in queuing of five vehicles (representing a queue of 62 vehicles) and a delay of 1470 seconds. It should be noted that delay actually decreases between the Do Nothing and Do Something 1 Scenarios in the AM Peak but increases in the PM Peak. Similar results are evident in both the travel planning (Do Something 2) and Shenley Park (Do Something 3) scenarios.

4.2.19 A package of mitigation is proposed within the Updated TA[7] and is considered further in **Section 5** of this TRN2.

JUNCTION 9

4.2.20 The junction capacity assessment for this location has been updated to reflect the traffic flow diagrams in **Appendix B.** The updated junction capacity assessment results are shown in **Table 4-5**. Full modelling output is contained in **Appendix C**.

[7] Updated TA (May 2020) Paragraphs 8.3.13 to 8.3.16

Table 4-5 – Junction 9 – A421/Warren Road

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2020 Base

A - A421 (East)	0.3	12.13	0.25	0.2	11.48	0.16
B – Shucklow Hill*	7.7	1546.81	9999	6.5	1479.70	9999
C - A421 (West)	0.3	11.69	0.22	0.1	11.87	0.10
D - Little Horwood Road	24.1	1414.26	9999	0.2	16.76	0.18
2033 Do Something 1						
A - A421 (East)	0.3	12.62	0.23	0.2	12.03	0.17
B – Shucklow Hill*	7.8	1625.52	9999	6.5	1513.04	9999
C - A421 (West)	0.3	12.20	0.23	0.1	12.33	0.11
D - Little Horwood Road	24.1	1417.14	9999	0.2	17.69	0.19
2033 Do Something 2						
A - A421 (East)	0.3	12.57	0.24	0.2	11.94	0.17
B – Shucklow Hill*	7.8	1614.79	9999	6.5	1506.71	9999
C - A421 (West)	0.3	12.13	0.23	0.1	12.25	0.11
D - Little Horwood Road	24.1	1416.72	9999	0.2	17.54	0.19
2033 Do Something 3						
A - A421 (East)	0.3	12.80	0.21	0.2	12.23	0.17
B – Shucklow Hill*	7.8	1675.60	9999	6.6	1524.92	9999
C - A421 (West)	0.3	12.49	0.23	0.1	12.43	0.11
D - Little Horwood Road	24.1	1419.15	9999	0.2	18.03	0.19

4.2.21 The results presented in **Table 4-5** show that in the 2020 Base the junction operates with satisfactory performance (RFC below 0.75[8]). In the future year of 2033 (Do Nothing) the Shucklow Hill and Little Horwood Road arms operate above capacity (RFC of 1) in the AM peak and the Shucklow Hill arm performs similarly in the PM peak. The results indicate an RFC of 9999 which indicates that there is insufficient capacity on the arm to accommodate the demand flow.

4.2.22 With the additional traffic associated with the Proposed Development (Do Something 1), performance of the junction decreases slightly, although it is evident from the Do Something 1 scenario that the impact of the Proposed Development is marginal.

4.2.23 Similar results are evident in both the travel planning (Do Something 2) and Shenley Park (Do Something 3) scenarios.

4.2.24 A package of mitigation was proposed within the Updated TA[9] and is considered further in **Section 5** of this TRN2.

JUNCTION 10

BC Comments

'For the 2033 Base, 2033 DS1, 2033 DS2 and 2033 DS3 the Arm B to A vehicle mix is 2% in the AM, while the 2020 Base is 3% and all flow diagrams show 2.5%. Would expect these values to be match.'

'For the 2033 Base, 2033 DS1, 2033 DS2 and 2033 DS3 scenarios the Arm C to A vehicle mix is 3% in the PM, while 2020 Base is 4% and all flow diagrams show 3.5%. Would expect these values to be match.'

'Junction 10 – Arms B + C seem to have a worse comparison between observed and modelled queues than non-calibrated model and should be clarified.'

WSP Response

4.2.25 The junction capacity assessment for this location has been reviewed to reflect the comments made by BC and the traffic flows updated to reflect the traffic flow diagrams in **Appendix B.** The updated

[8] Appropriate RFC = 0.75 as this is priority junction on a high-speed road (50mph +) in accordance with the Junctions 9 User Guide.

[9] Updated TA (May 2020) Paragraphs 8.3.13 to 8.3.16

junction capacity assessment results are shown in **Table 4-6**. Full modelling output is contained in **Appendix C**.

Table 4-6 – Junction 10 – A421/Nash Road/Winslow Road Roundabout

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2020 Base						
A - A421 (East)	3.8	12.94	0.80	4.6	14.57	0.83
B - B4033 Nash Road	7.0	71.79	0.91	1.8	24.57	0.65
C - A421 (West)	15.2	62.74	0.97	16.3	60.94	0.97

2033 Do Nothing						
A - A421 (East)	10.8	33.14	0.93	16.0	45.13	0.96
B - B4033 Nash Road	55.8	444.84	1.32	7.8	96.26	0.94
C - A421 (West)	58.1	212.53	1.10	88.1	286.65	1.15
D - Winslow Rd	0.2	6.09	0.16	0.2	6.00	0.17
2033 Do Something 1						
A - A421 (East)	16.2	47.31	0.97	23.5	61.89	0.99
B - B4033 Nash Road	69.5	569.75	1.43	11.5	132.75	1.01
C - A421 (West)	70.8	266.31	1.12	111.3	388.07	1.20
D - Winslow Rd	0.2	6.10	0.16	0.2	6.02	0.17
2033 Do Something 2						
A - A421 (East)	15.3	45.00	0.96	22.3	59.23	0.99
B - B4033 Nash Road	67.5	551.12	1.42	10.9	126.51	1.00
C - A421 (West)	68.7	257.56	1.12	107.5	371.45	1.19
D - Winslow Rd	0.2	6.10	0.16	0.2	6.01	0.17
2033 Do Something 3						
A - A421 (East)	20.6	57.77	0.98	25.6	66.18	1.00
B - B4033 Nash Road	75.2	636.97	1.48	12.5	141.86	1.02
C - A421 (West)	75.0	281.01	1.13	119.5	423.04	1.21
D - Winslow Rd	0.2	6.10	0.16	0.2	6.02	0.17

4.2.26 The results presented in **Table 4-8** show that in the 2020 Base the A421 western arm is approaching capacity (RFC of 1) in both the AM and PM peaks. In the future year of 2033 (Do Nothing) the A421 western arm and Nash Road arm are operating above capacity (RFC of 1) in the AM peak with the A421 Eastern arm approaching capacity in both peak hours (RFC of 1).

4.2.27 With the additional traffic associated with the Proposed Development (Do Something 1), the performance of the junction decreases slightly with an increase in queueing of 23 vehicles in the PM peak on the A421 western arm as a result of the junction operating with an RFC over 1. Similar results are evident in both the travel planning (Do Something 2) and Shenley Park (Do Something 3) scenarios. It is considered that the Proposed Development has very little impact on the operation of this junction.

4.2.28 A package of mitigation was proposed within the Updated TA and refined within TRN1 and is considered further in **Section 5** of this TRN2.

JUNCTION 11

4.2.29 The flows at this junction do not change as a result of the changes to the traffic flow diagrams made in TRN2. As such, the results remain as presented in the Updated TA.

4.2.30 The results presented in the Updated TA show that the junction operates with satisfactory performance (RFC below 0.85) in all scenarios assessed. No traffic generated by the Proposed Development would be routed via this junction within this TRN2 and therefore there is no impact as a result of the Proposed Development. Modelling of this junction and subsequent consideration of mitigation is therefore not considered necessary.

4.2.31 SUMMARY OF THE DIFFERENCES COMPARED TO UPDATED TA AND TRN1

4.2.32 **Table 4-7** provides a summary of the changes presented in this Section when compared to the Updated TA.

Table 4-7 – Elements of Updated TA and TRN1 that are updated by TRN2

Section of Updated TA	Section of TRN1	Description	Area of Difference
Paragraphs 7.3.2 to 7.3.7	Paragraphs 7.2.1 to 7.2.11	Junction 3 Baseline Modelling	The junction capacity assessment presents an updated set of results
Paragraphs 7.3.8 to 7.3.10	Paragraphs 7.2.12 to 7.2.19	Junction 4 Baseline Modelling	The junction capacity assessment presents an updated set of results
Paragraphs 7.3.11 to 7.3.16	Paragraphs 7.2.20 to 7.2.25	Junction 7 Baseline Modelling	The junction capacity assessment presents an updated set of results
Paragraphs 7.3.17 to 7.3.21	Paragraphs 7.2.26 to 7.2.32	Junction 8 Baseline Modelling	The junction capacity assessment presents an updated set of results
Paragraphs 7.3.22 to 7.3.28	Paragraphs 7.2.33 to 7.2.41	Junction 9 Baseline Modelling	The junction capacity assessment presents an updated set of results
Paragraphs 7.3.29 to 7.3.33	Paragraphs 7.2.42 to 7.2.47	Junction 10 Baseline Modelling	The junction capacity assessment presents an updated set of results

5 MITIGATION MODELLING UPDATE

5.1 INTRODUCTION

5.1.1 This section provides an updated set of mitigation junction capacity assessments and refined package of highway mitigation.

5.2 MITIGATION MODELLING

JUNCTION 3

BC Comments

'No comment.'

WSP Response

5.2.1 The mitigation modelling for Junction 3 has been reviewed to reflect the updated traffic flow diagrams in **Appendix B**. A layout plan showing the mitigation measures proposed is contained in **Appendix D**. The results are presented in **Table 5-1** with full modelling results in **Appendix E.**

Table 5-1 – Junction 3 – Bletchley Road/Stoke Road/Drayton Road/Whaddon Road Mitigation Results

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2033 Do Nothing (Pre-mitigation)						
A- Bletchley Road	0.1	5.69	0.08	0.2	6.05	0.14
B-Stoke Road	47.0	373.57	1.19	27.1	208.11	1.09
C-Drayton Road	0.1	5.79	0.06	0	5.93	0.03
D-Whaddon Road	16.1	147.23	1.02	9.7	95.91	0.95
2033 Do Something 1 (Pre-mitigation)						
A- Bletchley Road	0.1	5.71	0.08	0.2	6.09	0.14
B-Stoke Road	72.5	614.15	1.30	52.9	437.38	1.22
C-Drayton Road	0.1	5.74	0.06	0	5.83	0.03
D-Whaddon Road	46.0	416.88	1.20	27.5	221.76	1.10
2033 Do Something 1 (Post-Mitigation)						
A - Bletchley Rd	0.7	8.82	0.40	0.6	8.30	0.38
B - Stoke Rd	2.6	18.61	0.73	2.5	18.28	0.72
C - Drayton Rd	0.4	7.92	0.31	0.3	7.05	0.22
D - Whaddon Rd	1.5	11.94	0.6	1.2	9.85	0.54
2033 Do Something 2 (Post-Mitigation)						
A - Bletchley Rd	0.6	8.72	0.39	0.6	8.22	0.38
B - Stoke Rd	2.6	18.14	0.73	2.4	17.61	0.71
C - Drayton Rd	0.4	7.83	0.31	0.3	6.97	0.22
D - Whaddon Rd	1.4	11.65	0.59	1.1	9.68	0.53
2033 Do Something 3 (Post-Mitigation)						
A - Bletchley Rd	0.7	9.07	0.40	0.6	8.39	0.38
B - Stoke Rd	2.8	19.44	0.74	2.7	19.57	0.74
C - Drayton Rd	0.5	8.02	0.32	0.3	7.19	0.23
D - Whaddon Rd	1.6	12.70	0.63	1.2	10.06	0.55

5.2.2 **Table 5-1** demonstrates that the junction operates within capacity (RFC less than 1) in all mitigation modelled scenarios.

5.2.3 The mitigation previously agreed with Buckinghamshire County Council (BCC) is included within the Updated TA[10]. It is understood that BC remain of the view that it would be beneficial to reduce the attractiveness of routes through Newton Longville by introducing additional journey time delay by incorporating appropriate highway design features as opposed to enhancing capacity at this junction.

5.2.4 A contribution towards a traffic calming scheme for Newton Longville as originally proposed in the Updated TA still remains the preferred mitigation by BC and is included in **Appendix D**.

JUNCTION 7

BC Comments

'Conflict angle of Arm C (Whaddon Road) uses the second methodology for this geometric parameter, which is not correct and different to the rest of the arms.'

'Conflict angle of Arm C (Whaddon Road) uses the second methodology for this geometric parameter, which is not correct and different to the rest of the arms. Furthermore, this is a new scheme layout option but no sight of revised geometric measurement drawing to allow detailed review.'

WSP Response

5.2.5 Based upon the modelling results for this junction presented in Section 4, the modified mitigation package for this junction developed as part of TRN1 has been tested. The layout for this mitigation proposal, incorporating minor revisions for the purposes of TRN2 is shown in **Appendix D.** The mitigation modelling has been reviewed to reflect the updated traffic flow diagrams presented in **Appendix B**. The results of this updated analysis are shown in **Table 5-2** with full modelling results presented in **Appendix E.**

[10] Updated TA (May 2020) Paragraphs 8.3.3 to 8.3.8

Table 5-2 – Junction 7 – Whaddon Crossroads Mitigation

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2033 Do Nothing (Pre-mitigation)						
A - Coddimoor Ln	0.6	13.04	0.39	0.6	11.74	0.38
B - A421 (East)	21.8	55.28	0.99	33.6	74.74	1.01

B - A421 (East)	42.9	94.53	1.03	55.6	112.02	1.05
C - Whaddon Rd	81.8	731.77	1.48	111.8	1325.61	1.84
D - A421 (West)	77.4	175.41	1.10	31.9	78.30	1.01
2033 Do Something 1 (Post-mitigation)						
A - Coddimoor Ln	0.8	17.31	0.46	0.7	14.09	0.42
B - A421 (East)	3.7	8.91	0.79	4.2	9.39	0.81
C - Whaddon Rd	48.6	368.99	1.25	67.1	634.65	1.53
D - A421 (West)	33.1	78.16	1.02	11.8	31.36	0.94
2033 Do Something 2 (Post-mitigation)						
A - Coddimoor Ln	0.8	17.26	0.46	0.7	13.93	0.42
B - A421 (East)	3.6	8.70	0.79	4.0	9.16	0.81
C - Whaddon Rd	46.3	351.86	1.24	64.6	607.98	1.50
D - A421 (West)	31.8	75.77	1.01	11.2	29.97	0.93
2033 Do Something 3 (Post-mitigation)						
A - Coddimoor Ln	0.8	17.36	0.46	0.7	14.50	0.43
B - A421 (East)	4.2	9.75	0.81	4.3	9.69	0.82
C - Whaddon Rd	57.2	436.84	1.32	73.9	694.36	1.59
D - A421 (West)	36.1	83.55	1.02	13.2	34.85	0.95

5.2.6 The results presented in **Table 5-2** show that the proposed modified mitigation package will reduce queueing and delay on the key A421 and Whaddon Road arms of the junction below the levels identified in the 2033 Do Nothing Scenario. Small increases in queuing and delay will result on the Coddimoor Lane arm. However, overall the mitigation will provide a betterment in this location.

JUNCTION 8 AND 9

5.2.7 The mitigation junction modelling for Junctions 8 and 9 have been reviewed to reflect the updated traffic flow diagrams presented in **Appendix B**. A refined mitigation layout is provided in **Appendix D**. The results of this updated analysis are shown in **Table 5-3** with full modelling results presented in **Appendix E.**

Table 5-3 – Junctions 8 and 9 - Warren Road/A421 And A421/Shucklow Hill/Little Horwood Road Mitigation Results

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2033 Do Nothing (Pre-Mitigation)						
8 B - Warren Road	56.6	1996.20	9999	15.5	1519.60	9999
8 C - A421 (West)	0	10.01	0.01	0	10.87	0

5.2.8 The mitigation modelling for Junctions 8 and 9 indicates that in the Do Something 1 scenario queuing and delay is reduced to below the 2033 Do Nothing scenario. Both queueing and delay are lower on all arms when compared to the 2033 Do Nothing scenario. The mitigation proposed is therefore considered adequate to mitigate the impacts of the development.

JUNCTION 10

BC Comments

'Drawing in the Appendix shows amendment to A421 E but there are also geometric changes in the model to A421 W, but there is not clear evidence of any changes to this arm, is there a reason for the change in geometries for this arm.'

'The intercept adjustments for both A421 arms have been removed, the drawing would indicate no change to the A421 West arm and by adjusting kerbline on the eastern arm I would envisage that the correction should be retained as per the guidance as outlined in the JUNCTIONS 9 user guide.'

'This is a new scheme layout option but no sight of revised geometric measurement drawing to allow detailed review.'

WSP Response

5.2.9 The mitigation junction modelling for Junction 10 has been reviewed to reflect the updated traffic flow diagrams presented in **Appendix B**. Based upon the modelling results for this junction presented in Section 4, the modified mitigation package for this junction developed as part of TRN1[11] has been tested. The layout for this mitigation proposal, incorporating minor revisions for the purposes of TRN2 is shown in **Appendix D**. The results of this updated analysis are shown in **Table 5-4** with full modelling results presented in **Appendix E.**

D - Winslow Rd	0.2	6.84	0.18	0.2	7.29	0.20

5.2.10 The mitigation modelling for Junction 10 indicates that in the Do Something 1 scenario queuing and delay is reduced to below the 2033 Do Nothing scenario on the two A421 arms. There is a very small increase in queuing of one vehicle on Nash Road in the AM Peak and two vehicles in the PM

peak. The mitigation proposed is therefore considered adequate to mitigate the impacts of the development.

5.3 MITIGATION SUMMARY

5.3.1 **Table 5-5** provides a summary of the proposed mitigation as a result of the modified analysis presented in TRN2; the table also identifies where the mitigation proposals originally identified in the Updated TA and TRN1 have been superseded.

Table 5-5 – Mitigation Summary

Junction	Mitigation proposed within TRN2	TRN2 compared with Updated TA and TRN1
Junction 3 – Bletchley Road/Stoke Road/Drayton Road/Whaddon Road Mitigation Results	Financial contribution to Traffic Calming through Newton Longville as shown on drawings 1067760-D027-D037-D	As per Updated TA[12] with minor amendments shown to the indicative Junction 3 layout in drawing 70069442-002-P02
Junction 7 – Whaddon Crossroads	Financial contribution to wider A421 corridor improvement in lieu of kerb realignments shown on drawing 70069442-005-P04	As previously proposed within the Updated TA[13] with additional mitigation included on Whaddon Road comprising narrowing of the splitter island to provide additional entry width as shown on drawing 70069442-005-P04
Junctions 8 and 9 - Warren Road/A421 And 421/Shucklow Hill/Little Horwood Road	Financial contribution to wider A421 corridor improvement in lieu of junction signalisation shown on drawings 70069442-006-P02 and 70069442-007-P02	As previously proposed within the Updated TA,[14] but also includes minor amendments to the Warren Road arm as shown on drawings 70069442-006-P02 and 70069442-007-P02

[12] Updated TA (May 2020) Paragraphs 8.3.3 to 8.3.8

[13] Updated TA (May 2020) Paragraphs 8.3.9 to 8.3.12

[14] Updated TA (May 2020) Paragraphs 8.3.13 to 8.3.16

Junction	Mitigation proposed within TRN2	TRN2 compared with Updated TA and TRN1
Junction 10 - A421/Nash Road/Winslow Road	Financial contribution to wider A421 corridor improvement in lieu of kerb realignment	As previously proposed within the Updated TA,[15] but includes additional mitigation in the form of splitter island narrowing to provide enhanced entry width to reduce queuing on Nash Road as shown on drawing 70069442-008-P04

5.3.2 SUMMARY OF THE DIFFERENCES COMPARED TO UPDATED TA AND TRN1

5.3.3 **Table 5-6** provides a summary of the changes presented in this Section when compared to the Updated TA and TRN1.

Table 5-6 – Elements of Updated TA and TRN1 that are updated by TRN2

Section of Updated TA	Section of TRN1	Description	Area of Difference
Table 8.2	Paragraphs 8.1.1 to 8.1.2	Junction 3 Mitigation Modelling	The TRN2 modelling presents a modified set of results. The proposed mitigation represents the refined and modified proposals and supersedes those identified in the Updated TA and TRN1.
Paragraphs 8.3.9-8.3.12	Paragraphs 8.1.5 to 8.1.11	Junction 7 Mitigation Modelling	The TRN2 modelling presents a modified set of results. The proposed mitigation represents the refined and modified proposals and supersedes

[15] Updated TA (May 2020) Paragraphs 8.3.17 to 8.3.20

Section of Updated TA	Section of TRN1	Description	Area of Difference
			those identified in the Updated TA and TRN1.
Paragraphs 8.3.13-8.3.16	Paragraphs 8.1.12 to 8.1.14	Junctions 8 and 9 Mitigation Modelling	The TRN2 modelling presents an alternative set of results. The proposed mitigation represents the refined and modified proposals and supersedes those identified in the Updated TA and TRN1.
Paragraphs 8.3.17-8.3.20	Paragraphs 8.1.15 to 8.1.24	Junction 10 Mitigation Modelling	The TRN2 modelling presents an alternative set of results. The proposed mitigation represents the refined and modified proposals and supersedes those identified in the Updated TA and TRN1.
Table 8.13	Table 8-8	Highway Mitigation Summary	Updated Table 5-5 supersedes that presented in the Updated TA and TRN1

6 SITE ACCESS MODELLING

6.1 INTRODUCTION

6.1.1 This section presents updated junction capacity assessments for the site access points taking account of the updated trip generation and distribution as shown on the traffic flow diagrams in **Appendix B**.

6.2 BUCKINGHAM ROAD ACCESS

6.2.1 **Table 6-1** shows the junction capacity assessment for the Buckingham Road Access to reflect the updated trip generation and trip distribution. Full model outputs can be found in **Appendix F**.

Table 6-1 – Buckingham Road Access Modelling

Arm Description	AM			PM		
	Queue (Veh)	Delay (s)	RFC	Queue (Veh)	Delay (s)	RFC
2033 Do Something 1						
Buckingham Road S	0.5	3.83	0.34	1.5	6.58	0.61
Access SW	0.2	4.24	0.13	0.1	5.37	0.09

2033 Do Something 3						
Site Access to Whaddon Road (S)	0.1	5.97	0.10	0.1	5.76	0.08
Site Access to Whaddon Road (N)	0.5	11.05	0.34	0.2	8.97	0.19
Whaddon Road (S) to Site Access	0.1	6.41	0.09	0.1	6.64	0.11

6.3.2 **Table 7-2** shows that the junction will operate within capacity in all modelled scenarios once account is made of the updated trip generation and distribution.

6.3.3 SUMMARY OF THE DIFFERENCES COMPARED TO UPDATED TA AND TRN1

6.3.4 **Table 6-3** provides a summary of the changes presented in this Section when compared to the Updated TA and TRN1.

Table 6-3 – Elements of Updated TA and TRN1 that are changed by TRN2

Section of Updated TA	Section of TRN1	Description	Area of Difference
Section 7.2	Section 7.1	Buckingham Road and Whaddon Road Site Accesses	Updated junction capacity assessments present a modified set of results that supersede those presented in the Updated TA and TRN1

7 IMPACT ON VILLAGES

7.1 INTRODUCTION

BC Comment

'On discussion with the Highway Consultant, it has been agreed that the following will be provided:

1. Updated assessment on the Impact on Villages taking into consideration the increased employment trips and revised distribution has outlined in TRN1.'

WSP Response

7.1.1 The impact on villages was considered within the Updated TA with reference to the 'Guidelines for the Environmental Assessment of Road Traffic' (GEART) produced by the Institute of Environmental Assessment (1993). The GEART states that whilst traffic forecasting is not an exact science, a change in traffic flow of less than 10% creates no discernible environmental impact. As such two rules are presented within the GEART for screening whether a detailed assessment is required:

- Rule 1 – include highway links where traffic flows will increase by more than 30% (or the number of heavy goods vehicles will increase by more than 30%)
- Rule 2 – include any other specifically sensitive areas where traffic flows have increased by 10% or more.

7.1.2 Rule 1 and 2 have been used as an appropriate methodology to assess likely impacts through the local villages using the modified distribution as requested by BC.

7.2 IMPACT ASSESSMENT

7.2.1 **Table 7-1** and **Table 7-2** show the two 2033 Do Nothing scenarios that were previously considered and presented in the Updated TA[16]

Table 7-1 – 2033 Do Nothing (Updated TA)

5	Mursley	2%	6%	4%	8%	4%	6%
		E/b	W/b	Total	E/b	W/b	Total
6	Newton Longville	16%	11%	14%	12%	19%	15%

7.2.4 The results of this revised assessment identify that the greatest increases in traffic flow would potentially be through Little Horwood (Do Something 1), with a forecast increase of 20% northbound in the PM peak. Little Horwood does have a conservation area and should therefore be considered 'sensitive' in nature and against the lower GEART threshold for impact (i.e. a 10% or more change in traffic flow in a specifically sensitive area). However, the actual change in traffic flow in the PM peak is only six vehicles northbound and seven vehicles southbound; a total of 13 vehicles. This level of change would be imperceptible and is not considered significant.

7.2.5 The forecast increases in traffic in 2033 through Newton Longville are shown to be 20% or less. Newton Longville does have a conservation area and should therefore be considered 'sensitive' in nature and against the lower GEART threshold for impact (i.e. a 10% or more change in traffic flow in a specifically sensitive area).

7.2.6 A scheme to introduce traffic calming through Newton Longville was previously developed and agreed with BC in 2016 to introduce additional delay to vehicles and minimise 'through' traffic. This package of mitigation (Included within **Appendix D**) is still proposed and will therefore provide mitigation.

7.2.7 Changes in traffic flow through the other villages are less than 8% with the exception of Little Horwood, which has very low volume increases (but a higher percentage due to the minimal traffic on the route). Therefore, no additional impacts have been identified that would require mitigation.

7.2.8 Whilst the results of this assessment are slightly different with greater impacts shown in Little Horwood and Newton Longville the conclusions reached are the same as that presented in the Updated TA[17].

7.2.9 SUMMARY OF THE DIFFERENCES COMPARED TO UPDATED TA AND TRN1

7.2.10 **Table 7-9** provides a summary of the changes presented in this Section when compared to the Updated TA and TRN1.

Table 7-9 – Elements of Updated TA and TRN1 that are updated by TRN2

Section of Updated TA	Section of TRN1	Description	Area of Difference
Section 7.4	Not considered in TRN1	Impact on Villages	Updated results for the assessment which incorporate the modified approach supersede those presented in the Updated TA

[17] Updated TA, May 2020; Section 7.4

8 COBALT ANALYSIS

8.1 INTRODUCTION

BC Comment

'On discussion with the Highway Consultant, it has been agreed that the following will be provided:

2. Updated assessment on Highway Safety using the Cobalt software taking into consideration the increased employment trips and revised distribution has outlined in TRN1.'

WSP Response

8.1.1 Within the Updated TA[18] the impacts of the Proposed Development on collisions were assessed using the computer programme COBALT (Cost and Benefit to Accidents – Light Touch) developed by the Department of Transport (DfT).

8.1.2 COBALT is a computer program developed to undertake the analysis of the impact of a transport scheme on collisions as part of the economic appraisal of road schemes. The assessment is based on a comparison of collisions by severity and associated costs across an identified network in 'Without-Scheme/Development' and 'With-Scheme/Development' forecasts, using details of link and junction characteristics, relevant collision rates and costs and forecast traffic volumes by link and junction.

8.1.3 COBALT analysis provides a summary of the likely impact on collisions across a defined study area. Each link is coded by the degree to which the Proposed Development will provide benefits in terms of collisions. As the Proposed Development will result in an increase in traffic, the impact will always show negative values. However, the extent to which a negative value is derived will be dependent upon the volume of additional traffic that the Proposed Development would generate.

8.2 COBALT ANALYSIS

8.2.1 The COBALT analysis has been re-run with the updated trip generation and distribution to determine whether the impacts on Highway Safety have changed.

8.2.2 **Figure 8-1** shows that the majority of links across the study area will see very small changes in 'negative benefits' (as they are described in COBALT). The only links showing more than a very

[18] SWMK Updated TA (May 2020) Section 7.6

small change are B4034 Buckingham Road, A421 Standing Way to the east of the Site and to a lesser degree V1 Snelshall Street.

Figure 8-1 - COBALT Benefits

8.2.3 The main findings from the COBALT analysis show an increase of 140 collisions with 202 casualties over the 60-year appraisal period as a result of the Proposed Development, meaning on average there would be an additional 2.4 collisions with 3.4 casualties per year.

8.2.4 The increase in collisions by severity is shown in **Table 8-1.**

Table 8-1 - COBALT Collisions - Casualty Prediction Over 60 years

	Slight	Serious	Fatal	Total Casualties
Without Proposed Development	2,857	356	48	3,261
With Proposed Development	3,037	377	50	3,464
Difference (60 years)	+180	+21	+2	+203
Difference (average per year)	+3.0	+0.35	+0.033	+3.38

8.2.5 The results presented in this Section adopt the modified trip generation and distribution as agreed with BC. The overall results are very similar to those in the Updated TA and do not change the original conclusions[19].

8.2.6 SUMMARY OF THE DIFFERENCES COMPARED TO UPDATED TA AND TRN1

8.2.7 **Table 8-2** provides a summary of the changes presented in this Section when compared to the Updated TA.

Table 8-2 – Elements of Updated TA and TRN1 that are updated by TRN2

Section of Updated TA	Section of TRN1	Description	Area of Difference
Section 7.6	Not considered in TRN1	COBALT Analysis	Updated results for the assessment which supersede those presented in the Updated TA

[19] SWMK Updated TA (May 2020) Section 7.6

9 TRAVEL PLAN ACTION PLAN

9.1 INTRODUCTION

BC Comment

'On discussion with the Highway Consultant, it has been agreed that the following will be provided:

3. The provision of the costed Travel Plan as detailed in paragraph 4.2.16 to allow BC to review to determine appropriate levels of commitment.'

WSP Response

9.1.1 **Table 9-1** presents a costed action plan for the residential element of the Framework Travel Plan (FTP) including the role of Travel Plan Manager. This cost has been provided for the life of the TP (i.e: based on the agreed FTP) which is assumed to be 14 years from first occupation of the development through to full occupation (anticipated in 2031) plus five years (i.e. 2036).

9.1.2 Costs are provided for the residential component of the proposed development only as the workplaces and schools will implement their own TPs.

9.2 ACTION PLAN

Table 9-1 – Travel Plan Action Plan

Measure/Initiative		Cost (£)	Cost (£)		Assumptions
		Initial Cost	Annual Cost	Total Costs Over 14 Year Life of Travel Plan	
Management	Cost for Residential Travel Plan Co-ordinator (including Travel Plan Manager Role to oversee all Travel Plans across site)	-	£15,000	£210,000	1/2 of a full time member of staff @ full time salary of £30,000 per year for 14 year lifespan of Travel Plan
	Personalised Travel Planning	-	-	£104,343.75	£75 per household (assume 75% participation for 1855 units) - provided by Residential Travel Plan Co-ordinator
	Travel Surveys	-	£6,000	£42,000.00	Surveys in years 1, 3, 5, 7, 9, 11, 13
	Annual Travel Plan Monitoring Fees	-	£1,000	£14,000	Annual monitoring for life of plan (14 years) - £1000 per annum fee from BC

Measure/Initiative		Cost (£)	Cost (£)		Assumptions
		Initial Cost	Annual Cost	Total Costs Over 14 Year Life of Travel Plan	
Information	Induction / Welcome Pack	-	-	£37,100	Folders / Design and printing costs at £20 per household Packs provided to the first occupiers of each household. Packs to include: - Sustainable Travel Website Details - Walking and Cycling Maps - Public Transport Map and Timetable Information - MKC Car Share Permit Details - Electric Vehicle Charge Point and Green Car Bay Map - Personalised Travel Planning Voucher - Cycle Safety Training Course Voucher - Cycle Voucher - Bus Pass Voucher - Details of Motorcycle Training - Local Taxi Company Details - Car Share Database Details - Car Club Details
	Bespoke Information Leaflets	-	£4,000.00	£56,000.00	Promotional materials and events budget per annum
	Promotional and Marketing: - quarterly newsletters/posters - events - such as Ride to Work Day, World Car Free Day etc	-			
	Community Notice Board	£5,000.00			
	Sustainable Travel Website	£8,000.00	£1,000.00	£14,000.00	Set up and design cost + ongoing maintenance

Measure/Initiative		Cost (£)	Cost (£)		Assumptions
		Initial Cost	Annual Cost	Total Costs Over 14 Year Life of Travel Plan	
Transport Incentives	Car Sharing Scheme Database	-	-	-	No cost - Buckinghamshire Car Share to be promoted through welcome packs and on notice boards
	Car Club	-	-	£108,080.00	Based on proposal obtained by WSP from Co-wheels for the provision of up to 4 vehicles at £27,020 per vehicle. Price paid in instalments with three annual payments made per vehicle. Price includes for each dwelling to receive a free annual membership to the car club and £15 driving credit.
	Cycle Skills Training Vouchers	-	-	£13,912.50	Training assuming two people for 75% of dwellings take up the training. Cost of £5 per person based upon MKC family and adult Bikeability Level 2 cycle training course: https://www.getsmartertravelmk.org/cycling/skills-training
	Bicycle User Group	-	-	-	Promotion of bicycle user group by TPC through the Community website and travel website
	Motorcycle Training Vouchers	-	-	£23,187.50	Available for £50 from https://mcia.co.uk/en/mcia-ride/tryride (assume 25% of dwellings take up)
	Bus 'Taster' Ticket Vouchers	-	-	£105,735.00	1-month Arriva monthly ticket at £57 per ticket (assuming 100% of dwellings take up offer of one ticket per household)

Measure/Initiative	Cost (£)	Cost (£)		Assumptions
	Initial Cost	Annual Cost	Total Costs Over 14 Year Life of Travel Plan	
Bicycle Equipment and Accessories Vouchers	-	-	£92,750.00	£50 voucher per household (assumed 100% take-up)
Sub Total	**£13,000**	**£27,000**	**£821,108.75**	
Total (£) rounded		**£834,110.00***		
Cost Per Dwelling		**£449.65***		

*Note – Costs based upon 2020 prices.

Dear Sirs,

Re: South West Milton Keynes, Updated Transport Assessment
Location: Land South Of The A421 West Of Far Bletchley North Of The East West Rail Link And East Of Whaddon Road Newton Longville
Outline planning application with all matters reserved except for access for a mixed-use sustainable urban extension on land to the south west of Milton Keynes to provide up to 1,855 mixed tenure dwellings; an employment area (B1); a neighbourhood centre including retail (A1/A2/A3/A4/A5), community (D1/D2) and residential (C3) uses; a primary and a secondary school; a grid road reserve; multi-functional green space; a sustainable drainage system; and associated access, drainage and public transport infrastructure.

Thank you for your letter dated the 8th July 2020 in which you requested comment for the above application.

A review of the Transport Assessment and Travel Plan has been performed, alongside a review of the recently submitted Technical Note 1 (TRN1) which addressed initial highway comments raised in our response of 29th July 2020. Based on the review of TRN1 we have the following comments which require the provision of further information or amendments to allow us to complete our assessment.

On discussion with the Highway Consultant, it has been agreed that the following will be provided:

1. Updated assessment on the Impact on Villages taking into consideration the increased employment trips and revised distribution has outlined in TRN1.

2. Updated assessment on Highway Safety using the Cobalt software taking into consideration the increased employment trips and revised distribution has outlined in TRN1.

3. The provision of the costed Travel Plan as detailed in paragraph 4.2.16 to allow BC to review to determine appropriate levels of commitment.

TRN1 provided additional details on revised employment trips, distribution and junction models taking into consideration Buckinghamshire Council (BC) comments. A review of the employment trip data has shown this to be acceptable and the revised distribution within the BC area. However, several queries have been raised in the relation to the Base and Mitigation junctions detailed in the Tables 1 and 2 below.

It should be noted that the model review included an assessment of the Traffic Flow diagrams provided as part of the TRN1. On initial review and discussion with the Highway Consultant it was apparent that not all relevant diagrams for the reassessment in TRN1 were provided. Additional diagrams were sent detailing the process of the distribution of development flows, on further analysis not all flow information could be reconciled with further communication held with the Highway Consultant. The latest traffic flow diagrams were provided on Tuesday 29th September 2020 and are under review.

Table 1 – Base Model Review

Junction	Comment
J3	For the 2020 Base AM and PM scenarios the vehicle mix has been left as varies over time. The use of the ONE HOUR profile would dictate that only one-hour data should be entered. The use of varies over time will mean the model will use the entered first 15 minute of data as the whole period percentages and may impact on the results.
J4	D3 scenario – The AM vehicle mix for arms B and C and the PM vehicle mix for Arms A, B and C do not match the traffic flow diagram or the previous demand set percentages, I presume this is a data entry issues or is there a reason why the vehicle mix varies for this scenario?
J6	It has been noted that the approach width and entry width have been reduced on Whaddon Road compared to original Updated TA. These measurements were not originally queried and there is no reasoning provided for the change in TRN1. Also, if these have been changed for a reason it is anticipated that some of the other geometries for this arm would also have changed slightly such as flare length and conflict angle?
J6	Whaddon Road, Lane Level 1 storage. It is noted that this lane has had its storage reduced to 4 PCU as requested. Lane 2 is still showing as 5 PCU, generally lanes on the same level will have the same storage value and would expect both to be 4 PCU.
J6	The observed queue lengths seem high compared to my own quick assessment of these, the 'worst' average interval queues I get are AM 6 an PM 9 for Whaddon Road.
J6	The calibration has shown an increase in capacity for Arm A, which makes it less comparable. With a massive reduction on Arm B, Whaddon Road, which is nearly half the whole approach capacity. The results of which would not be helped by the additional capacity provided on Arm A. Such a large reduction in capacity would be unusal.
J6	The results for Whaddon Road may not be aided by a short flare, it has become more recently apparent that the negative impact of flare may be exacerbated when using lane simulation, as you are measuring flare and then adding flare by the lane creation. It may be necessary to amend by altering the approach width to the entry to ensure there is no double-counting of flare.
J7	For the 2033 Base, 2033 DS1, 2033 DS2 and 2033 DS3 the Arm D to B vehicle mix is 4% in the AM, while the 2020 Base is 5% and all flow diagrams show 4.5%. Would expect these values to be match.
J10	For the 2033 Base, 2033 DS1, 2033 DS2 and 2033 DS3 the Arm B to A vehicle mix is 2% in the AM, while the 2020 Base is 3% and all flow diagrams show 2.5%. Would expect these values to be match.
J10	For the 2033 Base, 2033 DS1, 2033 DS2 and 2033 DS3 scenarios the Arm C to A vehicle mix is 3% in the PM, while 2020 Base is 4% and all flow diagrams show 3.5%. Would expect these values to be match

Table 2 – Mitigation Model Review

Junction	Comment
J3	No comment
J6	The mitigation file has removed the capacity reductions and provides a much better set of results. It is not appropriate to remove the correction in this instance as in essence you are making a slight tweak to the entry width. Page 184 of the J9 user guide states that: '*A correction for a particular junction may still be appropriate in a new design, where minor changes are made at one or more junction entries, but only when these are made*

Junction	Comment
	to the geometric parameters used in the capacity calculations (an example of a minor change is the movement of a kerb line to increase entry width). The use of previously calculated corrections is not appropriate if changes are made which are not related to parameters used in the capacity calculations. Examples of such changes include altering the island size, changes in signing, re-marking of the junction or complete resurfacing.' If the correction were to still be applied, you will not get the positive impacts in the results that the mitigation scheme is showing.
J6	Standing Way (W) has an entry width of 4.21 m, this is a two-lane entry with previous submission of 9.6 m. What is the reason for the much-reduced entry width?
J6	It is evident that Standing Way (W) arm has changed from previous mitigation submitted, but no sight of revised geometric measurement drawing. The ICD is now smaller from previous submission and base but it is not clear how making amendments proposed to the width of central islands will impact on this compared to base model, especially as the lane measurements for the ICD on Standing Way E have the original ICD measurement?
J6	The lane storage on Whaddon Road, Lane Level 1 is 5 PCU for Lane 2. This should be 4 PCU to match adjacent Lane 1.
J6	The Demand Sets of DS1 AM and PM, DS2 AM and PM, DS3 AM and PM are missing the OD data for Arm C to Arm A (A421 E to A421 W.
J7	Conflict angle of Arm C (Whaddon Road) uses the second methodology for this geometric parameter, which is not correct and different to the rest of the arms
J7 Additional mitigation	Conflict angle of Arm C (Whaddon Road) uses the second methodology for this geometric parameter, which is not correct and different to the rest of the arms Furthermore, this is a new scheme layout option but no sight of revised geometric measurement drawing to allow detailed review.
J10	Drawing in the Appendix shows amendment to A421 E but there are also geometric changes in the model to A421 W, but there is not clear evidence of any changes to this arm, is there a reason for the change in geometries for this arm.
J10 / J10 Additional Mitigation	The intercept adjustments for both A421 arms have been removed, the drawing would indicate no change to the A421 West arm and by adjusting kerbline on the eastern arm I would envisage that the correction should be retained as per the guidance as outlined in the JUNCTIONS 9 user guide.
J10 Alternative Mitigation	This is a new scheme layout option but no sight of revised geometric measurement drawing to allow detailed review.

Further to the Bottledump calibration / model query detailed in Table 2 the following other items were raised in relation to the calibration:

1. Junction 3 – Whaddon Road, discrepancies remain between and observed queues. It is noted that this is now modelled as one lane to restrict capacity as discussed but still likely to be underrepresenting queues and delays on this Arm.
2. Junction 7 - Arms C and D seem to have a worse comparison between observed and modelled than non-calibrated model and should be clarified.
3. Paragraph 6.3.8 of TRN1 lists the junctions where calibration has been applied. Junction 8 is not included in this list however it would appear that at least one arm has different modelled queues Table 6.2 (Observed modelled queues Length Comparison – Post Calibration).

4. Junction 10 – Arms B + C seem to have a worse comparison between observed and modelled queues than non-calibrated model and should be clarified.

Discussions were held with the Highway Consultant around the calibration of models compared to queue lengths. It was apparent that there had been a differing of opinion on the requirements detailed in our initial highway response. This is to be rectified with the base model calibration to be further reviewed and re-submitted by the Highway Consultant.

As part of the recent Proof of Evidence for the upcoming Milton Keynes Council Appeal WSP provided revised modelling of the Tattenhoe Junction. Due to the potential for interaction with the development site access on Buckingham Road a review of the revised modelling has also been performed with the following comments for review and potential amendment by the Highway Consultant.

Table 3 – Tattenhoe Junction Model

Item	Comment
1	**Future Base ARCADY model**
1.1	The radius of 48.8 metres for the Standing Way West arm looks too low. The radius would appear to be at least 60 metres.
1.2	The ICD looks to be too small and does not extend to outer kerb lines of the junction outline.
1.3	For both Standing Way arms, the exclusive left turn lanes may be used less than the other two lanes due to the low left turn volumes, especially the eastern arm. Therefore, a negative intercept adjustment should be added to account for the lower use of the left turn lanes (making use of B. Chard methodology or use of lane simulation).
2.	**TA Mitigation Proposal (Part Signalisation)**
2.1	The Appendix is missing the Mean Max Queue, average delay per PCU, Practical Reserve Capacity and total network delay results for the 2033 Do Something Scenario 3.
2.2	Lane 1/1 (Standing Way West nearside) turning radius of 36 metres seems to low, a turning radius of 55 metres seems more appropriate.
2.3	The saturation flow the internal arm is 1800, this is not consistent with the 2000 saturation flow for the full signalisation mitigation option.
3	**Revised Mitigation Proposal (Full Signalisation)**
3.1	The average delay per PCU results in the Technical Note do not match the model or Appendix.
3.2	Lane 1/1 (Standing Way West nearside) is missing a turning radius for the left turn.
3.3	The saturation flow the internal arms is 2000, this is not consistent with the 1800 saturation flow for the part signalisation mitigation option.
3.4	Queues on the internal arms block back to the upstream junction entries, likely to result in worse results then shown.

Once we have resolved the remaining issues / been provided with the outstanding information we will then be able to provide a formal and final response to the application.

If you have any queries regarding any of the above, please do not hesitate to contact me.

Yours sincerely

James Bedingfeld
Highways Development Management
Planning Growth & Sustainability

Please note:
This advice is given at officer level only and is based on the facts and information you have supplied. It must be understood that the final decision on any planning application that may be submitted in the future rests with the Planning Authority.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

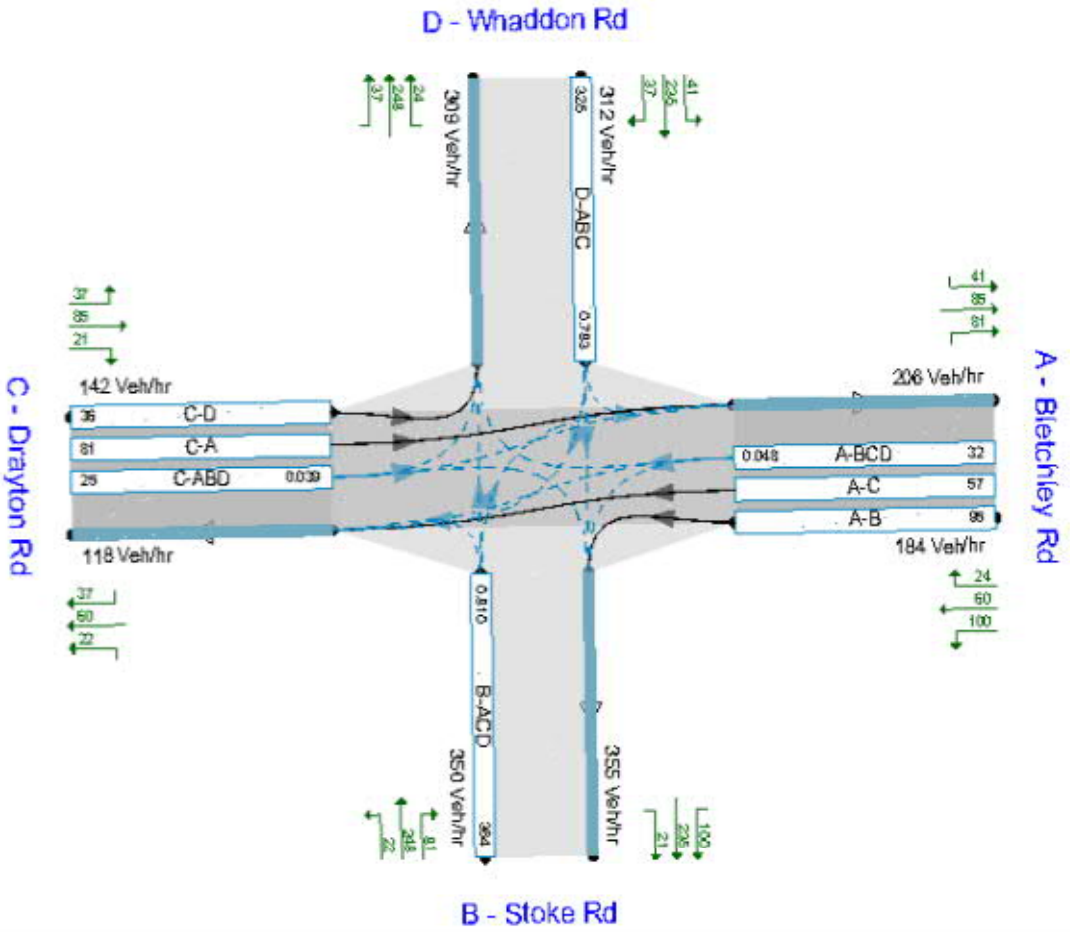
File Description

Title	Bletchley Road/ Stoke Road/ Drayton Road/ Whaddon Road
Location	51°58'28.41"N, 0°45'57.62"W
Site number	3
Date	03/12/2020
Version	

Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	Will Forster
Description	Whaddon Road arm modelled as one lane and reduced width of 2.5m to calibrate against queue lengths

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin



The junction diagram reflects the last run of Junctions.

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
J3	Bletchley Road/ Stoke Road/ Drayton Road/ Whaddon Road	Crossroads	Two-way		55.60	F

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Bletchley Rd		Major
B	Stoke Rd		Minor
C	Drayton Rd		Major
D	Whaddon Rd		Minor

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
A - Bletchley Rd	6.00			59.0	✓	0.00
C - Drayton Rd	6.00			79.3	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Stoke Rd	One lane	3.40	16	41
D - Whaddon Rd	One lane	2.50	30	33

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for A-D	Slope for B-A	Slope for B-C	Slope for B-D	Slope for C-A	Slope for C-B	Slope for C-D	Slope for D-A	Slope for D-B	Slope for D-C

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	Whaddon Road/ Westbrook End
Location	51°58'34.02"N, 0°46'21.76"W
Site number	4
Date	02/12/2020

Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	Will Forster

Data Errors and Warnings

Severity	Area	Item	Description
Warning	Major arm width	C - Whaddon Road (W) - Major arm geometry	For two-way major roads, please interpret results with caution if the total major carriageway width is less than 6m.

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
J4	Whaddon Road/ Westbrook End	T-Junction	Two-way		1.36	A

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	Whaddon Road (E)		Major
B	Westbrook End		Minor
C	Whaddon Road (W)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - Whaddon Road (W)	5.80			71.9	✓	0.00

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Lane width (m)	Visibility to left (m)	Visibility to right (m)
B - Westbrook End	One lane	3.38	24	44

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	526	0.097	0.244	0.154	0.349
B-C	676	0.105	0.264	-	-
C-B	616	0.241	0.241	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

C - Whaddon Rd		93.7	986.05	1.50	F
D - A421 (West)		84.4	191.78	1.11	F

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	Whaddon Crossroads
Location	51°59'6.32"N, 0°49'39.55"W
Site number	7
Date	02/12/2020
Version	
Status	(new file)
Identifier	

Client	
Jobnumber	
Enumerator	Will Forster
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Demand Set Summary

ID	Scenario name	Time Period name	Traffic profile type	Start time (HH:mm)	Finish time (HH:mm)	Time segment length (min)	Run automatically

Arms

Arms

Arm	Name	Description
A	Coddimor Ln	
B	A421 (East)	
C	Whaddon Rd	
D	A421 (West)	

Roundabout Geometry

Arm	V - Approach road half-width (m)	E - Entry width (m)	l' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Exit only
A - Coddimor Ln	2.80	6.70	8.5	21.5	50.6	40.0	
B - A421 (East)	2.90	7.70	8.6	26.3	50.6	25.5	
C - Whaddon Rd	2.90	6.10	9.0	19.7	50.6	42.0	
D - A421 (West)	3.10	7.50	12.9	28.0	50.6	32.0	

Slope / Intercept / Capacity

Arm Intercept Adjustments

Arm	Type	Reason	Direct intercept adjustment (PCU/hr)
A - Coddimor Ln	None		
B - A421 (East)	Direct	Calibration against queue lengths	200
C - Whaddon Rd	Direct	Calibration against queue lengths	-275
D - A421 (West)	None		

Roundabout Slope and Intercept used in model

Arm	Final slope	Final intercept (PCU/hr)
A - Coddimor Ln	0.519	1287
B - A421 (East)	0.564	1637
C - Whaddon Rd	0.514	1001
D - A421 (West)	0.587	1588

The slope and intercept shown above include any corrections and adjustments.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

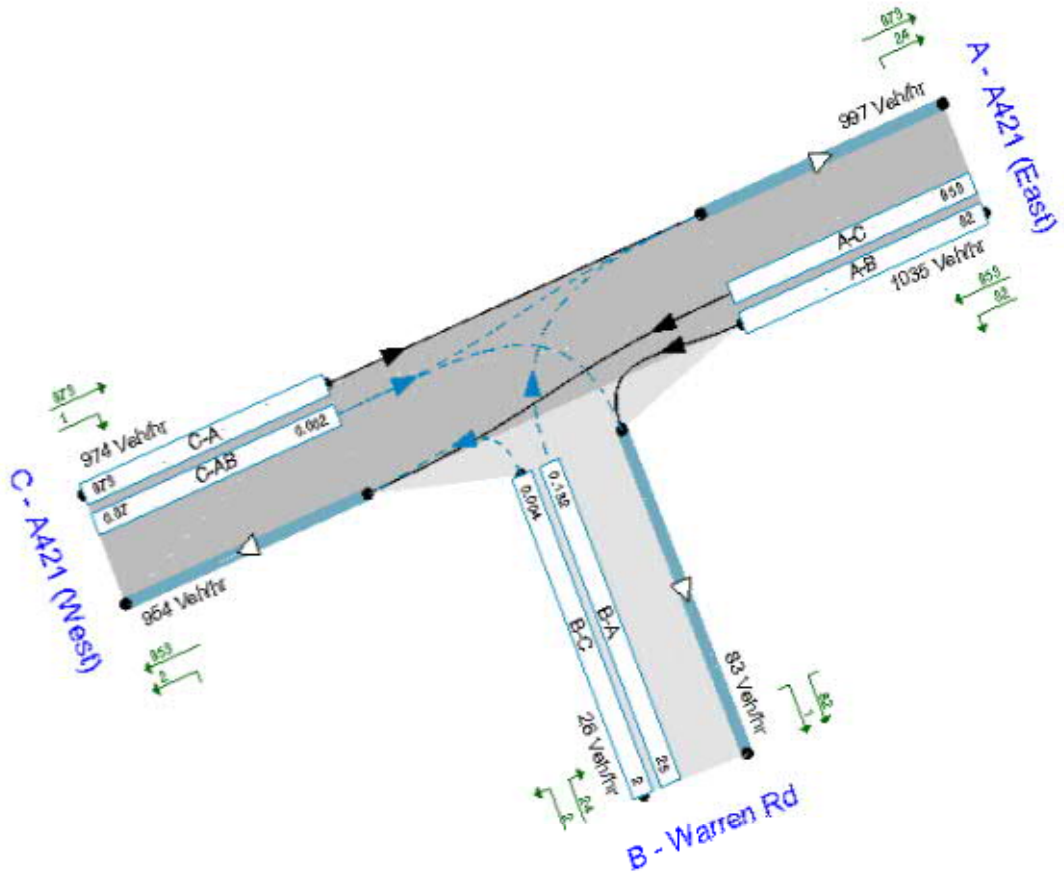
Title	Warren Road/ A421
Location	51°59'6.85"N, 0°50'10.28"W
Site number	8
Date	30/11/2020
Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	Will Forster

Description	Warren Road ,odelled as one lane to calibrate model against queue length data

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin



The junction diagram reflects the last run of Junctions.

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Demand Set Summary

Data Errors and Warnings

No errors or warnings

Junction Network

Junctions

Junction	Name	Junction type	Major road direction	Use circulating lanes	Junction Delay (s)	Junction LOS
J8	Warren Road/ A421	T-Junction	Two-way		11.38	B

Junction Network Options

Driving side	Lighting
Left	Normal/unknown

Arms

Arms

Arm	Name	Description	Arm type
A	A421 (East)		Major
B	Warren Rd		Minor
C	A421 (West)		Major

Major Arm Geometry

Arm	Width of carriageway (m)	Has kerbed central reserve	Has right turn bay	Width for right turn (m)	Visibility for right turn (m)	Blocks?	Blocking queue (PCU)
C - A421 (West)	6.25		✓	3.62	161.3	✓	9.25

Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.

Minor Arm Geometry

Arm	Minor arm type	Width at give-way (m)	Width at 5m (m)	Width at 10m (m)	Width at 15m (m)	Width at 20m (m)	Estimate flare length	Flare length (PCU)	Visibility to left (m)	Visibility to right (m)
B - Warren Rd	One lane plus flare	10.00	10.00	6.40	5.20	4.90	✓	3.00	250	122

Slope / Intercept / Capacity

Priority Intersection Slopes and Intercepts

Stream	Intercept (Veh/hr)	Slope for A-B	Slope for A-C	Slope for C-A	Slope for C-B
B-A	746	0.134	0.340	0.214	0.485
B-C	656	0.100	0.252	-	-
C-B	771	0.295	0.295	-	-

The slopes and intercepts shown above do NOT include any corrections or adjustments.

Streams may be combined, in which case capacity will be adjusted.

Values are shown for the first time segment only; they may differ for subsequent time segments.

Traffic Demand

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	A421/ Shucklow Hill/ Little Horwood Rd
Location	51°59'1.51"N, 0°51'11.19"W

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

File summary

File Description

Title	A421 Nash Road/ Windslow Road
Location	51°58'59.42"N, 0°52'6.64"W

Site number	10
Date	30/11/2020
Version	
Status	(new file)
Identifier	
Client	
Jobnumber	
Enumerator	Will Forster
Description	

Units

Distance units	Speed units	Traffic units input	Traffic units results	Flow units	Average delay units	Total delay units	Rate of delay units
m	kph	Veh	Veh	perHour	s	-Min	perMin

Analysis Options

Vehicle length (m)	Calculate Queue Percentiles	Calculate detailed queueing delay	Calculate residual capacity	RFC Threshold	Average Delay threshold (s)	Queue threshold (PCU)
5.75				0.85	36.00	20.00

Arms

Arms

Arm	Name	Description
A	A421 (East)	
B	B4033 Nash Road	
C	A421 (West)	
D	Winslow Rd	

Roundabout Geometry

Arm	V - Approach road half-width (m)	E - Entry width (m)	l' - Effective flare length (m)	R - Entry radius (m)	D - Inscribed circle diameter (m)	PHI - Conflict (entry) angle (deg)	Exit only
A - A421 (East)	3.80	8.30	6.0	28.6	50.1	43.0	
B - B4033 Nash Road	3.40	6.60	18.3	13.9	50.1	45.0	
C - A421 (West)	3.80	7.20	8.9	21.6	50.1	40.0	
D - Winslow Rd	3.40	7.20	6.7	20.1	50.1	42.0	

Slope / Intercept / Capacity

Arm Intercept Adjustments

Arm	Type	Reason	Direct intercept adjustment (PCU/hr)
A - A421 (East)	None		
B - B4033 Nash Road	Direct	Calibration against queue lengths	-535
C - A421 (West)	Direct	Calibration against queue lengths	-370
D - Winslow Rd	None		

Roundabout Slope and Intercept used in model

Arm	Final slope	Final intercept (PCU/hr)
A - A421 (East)	0.563	1505
B - B4033 Nash Road	0.555	995
C - A421 (West)	0.574	1195
D - Winslow Rd	0.536	1380

The slope and intercept shown above include any corrections and adjustments.
