Light pollution is a driver of insect declines: https://www.sciencedirect.com/science/article/abs/pii/S0006320719307797 Developers should not provide lighting which can be left on all night. The shops opposite me have lights on all night - not necessary, disturbs my sleep and the behaviour patterns of local insects and other wildlife

Ban fireworks (and bonfires): They are a fire risk, especially with global warming. They worsen air pollution, which is contributing to about 40,000 early deaths a year in the UK, many of them children. They cause light pollution, which can be disruptive, disorientating and terrifying to wildlife. The debris causes litter, which the Council turns a blind eye to, while imposing heavy fines on other people who litter. They pollute rivers, lakes and drinking water with oxidisers called perchlorates. They pollute the air with copper, potassium, sodium, magnesium, barium, strontium, aluminium, titanium, sulphur dioxide, hydrogen chloride as well as carbon dioxide and carbon monoxide

Salt should no be used for icy roads and paths etc. It kills all life in the soil. Use more eco-friendly alternatives to salt: Grit Sand Branded products such as 'Volcanic mineral ice traction granules', and 'Redmond ice slicer' may be worth looking into. There may be areas where signs and cones could be used.

Taking land for green energy processes should be avoided. Nature should come before energy. It is efficient to use waste for biofuel, but land should not be taken to grow biofuel, or to have extensive solar panels covering it. That is a wrong way forward. We need to be careful where we put solar panels. It should not be on land which could be rewilded, and only in locations that have a low environmental impact.
